

# Artist Renderings of New Design for Kimball Bell Tower

The design theme is "Lift High the Cross". The midsection is a geometric expansion of the double hexagon design in the base portion. It also has a spiraling or swirling visual effect as the members rotate from their base origin.

The upper curved part represent arms and hands stretched upward holding a cross aloft. The cross, with double horizontal arms on a single vertical member would seem suspended in mid air. The base section would be a dark color, the midsection a medium to dark color and the curves section a lighter color and the cross a bright gold.

With night lights on this, the cross shines and the lower parts become less important by being less visible, heightening the suspended cross effect. The bell is mounted in the base section as indicated.
